

Bokeh Cheat Sheet

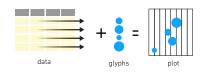

BecomingHuman.Al

Data Types

The Python interactive visualization library Bokeh enables high-performance visual presentation of large datasets in modern web browsers

Bokeh's mid-level general purpose bokeh.plotting interface is centered around two main components; data and glyphs

The basic steps to creating plots with the bokeh.plotting

- 1. Prepare some data:
- Python lists, NumPy arrays, Pandas DataFrames and other sequences of values
- 2. Create a new plot
- 3. Add renderers for your data, with visual customizations
- 4. Specify where to generate the output
- 5 Show or save the results

Data

>>> import numpy as np

Also see Lists, NumPv & Pandas

Under the hood, your data is converted to Column Data Sources. You can also do this manually:

>>> import pandas as pd >>> df = pd.DataFrame(np.array([[33.9,4,65, 'US'], [32.4,4,66, 'Asia'], [21.4,4,109, 'Europe']]), columns=['mpg',cyl', 'hp', 'origin'], index=['Toyota', 'Fiat', 'Volvo'])

>>> from hokeh models import ColumnDataSource

>>> cds_df = ColumnDataSource(df)

Plotting

>>> from bokeh.plotting import figure >>> p1 = figure(plot_width=300, tools='pan,box_zoom') >>> p2 = figure(plot_width=300, plot_height=300, x_range=(0, 8), y_range=(0, 8)) >>> p3 = figure()

Show or Save Your Plots

>>> show(p1) >>> show(layout) >>> save(p1) >>> save(layout)

Renderers & Visual Customizations

Glyphs

Scatter Markers

>>> p1.circle(np.array([1,2,3]), np.array([3,2,1]), fill color='white') >>> p2.square(np.array([1.5,3.5,5.5]), [1,4,3], color='blue', size=1)

Line Glyphs

>>> p1.line([1,2,3,4], [3,4,5,6], line_width=2) >>> p2.multi line(pd.DataFrame([[1,2,3],[5,6,7]]), pd.DataFrame([[3,4,5],[3,2,1]]),

Rows & Columns Layout

Rows

>>> from bokeh.lavouts import row >>> layout = row(p1,p2,p3)

Columns

>>> from bokeh.layouts import columns >>> layout = column(n1 n2 n3)

Nesting Rows & Columns

>>>layout = row(column(p1,p2), p3)

Grid Lavout

- >>> from bokeh.layouts import gridplot
- >>> row1 = [p1,p2]>>> row2 = [n3]
- >>> layout = gridplot([[p1,p2],[p3]])

Legends

Legend Location

Inside Plot Area

>>> p.legend.location = 'bottom_left'

Outside Plot Area

>>> r1 = p2.asterisk(np.array([1,2,3]), np.array([3,2,1])

>>> r2 = p2.line([1.2.3.4], [3.4.5.6])

>>> legend = Legend(items=[("One", [p1, r1]),("Two", [r2])], location=(0, -30))

>>> p.add_layout(legend, 'right')

Customized Glyphs

Selection and Non-Selection Glyphs

>>> p = figure(tools='box_select' >>> p.circle('mpg', 'cyl', source=cds_df, selection color='re nonselection_alpha=0.1)

Hover Glyphs

>>> hover = HoverTool(tooltips=None, mode='vline') >>> p3.add tools(hover)

Colormapping

>>> color_mapper = CategoricalColorMapper(factors=['US', 'Asia', 'Europe'],

palette=['blue', 'red', 'green'])

>>> p3.circle('mpg', 'cyl', source=cds_df, color=dict(field='origin',

transform=color_mapper),

legend='Origin'))

Linked Plots

Also see data

Also see data

Linked Axes

>>> p2.x range = p1.x range >>> p2.y_range = p1.y_range

Linked Brushing

>>> p4 = figure(plot_width = 100, tools='box_select,lasso_select')

>>> p4.circle('mpg', 'cyl', source=cds_df)

>>> p5 = figure(plot_width = 200, tools='box_select,lasso_select')

Tabbed Layout

>>> from bokeh.models.widgets import Panel, Tabs

>>> tab1 = Panel(child=p1, title="tab1")

>>> tab2 = Panel(child=p2, title="tab2")

>>> layout = Tabs(tabs=[tab1, tab2])

Legend Orientation

>>> p.legend.orientation = "horizontal"

>>> p.legend.orientation = "vertical"

Legend Background & Border

>>> p.legend.border line color = "navv" >>> p.legend.background_fill_color = "white"

Output

Output to HTML File

>>> from bokeh.io import output file, show >>> output file('my bar chart.html', mode='cdn')

Notebook Output

>>> from bokeh.io import output_notebook, show >>> output notebook()

Standalone HTML

>>> from bokeh.embed import file html >>> html = file html(p, CDN, "my_plot")

Components

>>> from bokeh.embed import components >>> script div = components(n)

Statistical Charts With Bokeh

Also see Data

Bokeh's high-level bokeh.charts interface is ideal for quickly creating statistical charts

>>> from bokeh charts import Bar

>>> p = Bar(df, stacked=True, palette=['red;'blue'])

>>> from bokeh.charts import BoxPlot >>> p = BoxPlot(df, values='vals', label='cyl', legend='bottom_right')

>>> from bokeh.charts import Histogram >>> p = Histogram(df, title='Histogram')

Scatter Plot

>>> from bokeh.charts import Scatter >>> p = Scatter(df, x='mpg', y ='hp', marker='square

xlabel='Miles Per Gallon',
